Operational Excellence in a Digital World

Operational Excellence in a Digital World

This event will gather world-class industry thought leaders, customers, and partners discussing the new Industry 4.0 technologies and share thoughts on how today's leaders can achieve long-term success using IoT-ready solutions

How to embrace 4IR in your organisation

March 2020 – Johannesburg – Early last year, predictions were made that 2019 would see the likes of the blockchain, artificial intelligence (AI), and virtual reality (VR) get a foothold amongst local businesses. But even though industry was more cautious than anticipated, the tools of the Fourth Industrial Revolution (4IR) are now in place to ensure the country remains competitive in the global marketplace.

Industrial customers, especially those in the chemicals; mining, metals, and minerals; and the manufacturing space, have the opportunity to leverage Industry 4.0 technologies to achieve massive gains in their organisations. This has led 4Sight BluESP in partnership with Aspentech, to announce its second digital transformation conference.

Aspects of 4IR that directly impact the industrial sector will be unpacked and by world-class thought leaders, providing leaders with information on how they can achieve long-term success using IoT-ready solutions.

The pace of change is significant. Local industries across the mining, manufacturing, chemicals, and energy verticals must adapt quickly to keep up with evolving demand. From customer expectations to global competitors, South African entities must embrace all aspects of 4IR if they are to remain relevant.

Fortunately, most decision-makers have moved from a 'wait and see' mindset to one where they are examining the use cases of implementing these technologies. There must be a demonstratable return on the investments they are making in 4IR. Therefore, gaining knowledge and an understanding of the requirements of how existing systems need to change to fit the digital world become crucial.

It is in this complex environment that the 'Operational Excellence in a Digital World' conference, taking place on 2 April 2020 at the Hyatt Regency in Rosebank will help drive change. Focusing on digital acceleration, the event will provide delegates with the opportunity to learn how to harness the combined power of AI, machine learning, IoT, and advanced analytics within leading-edge asset optimization software.

They will learn how to move their digitalization, Industry 4.0 and Smart Plant initiatives forward and how to achieve sustainable operational excellence faster. There will be a host of experienced international speakers that will discuss the next wave of digital transformation, who will provide unique perspectives on the opportunities provided by new technologies and how business leaders can achieve long-term success from them.

Operational Excellence in a Digital World

Learn how a network of smart agents in your machines can universally communicate all know conditions for improved equipment protection globally

Speakers include Tertius Zitzke, CEO of 4Sight; Steve Williams, VP of Manufacturing and Supply Chain Product Management of AspenTech; Aldo van Tonder, CDO of AccTech Systems; and Rudi Dreyer, CTO of 4Sight.

In the 'Asset Optimisation Powers the Digital Enterprise' discussion, delegates will hear how leaders in AI adoption see significant greater benefits. It will highlight some of the best practices for AI implementation in your business encompassing machine learning technology, how you use applications, and the way it fits into your business processes.

The event will focus on how to make the digital enterprise a reality by illustrating digital reference architecture for asset optimization. During lunch time, it will also feature mini-marketplace to show how 4Sight provides the key 4IR technologies and services needed to help industrial customers with their full end-to-end digital transformation journey.
